## German Engineering Matched with Australian Manufacture.

***New to Australia but a European leader since 1862, Zambelli Rainwater Products are now being manufactured in Australia. The Zambelli system has both stood the test of time and has been refined into the best roof plumbing system on the market. The system is built on a philosophy of only producing products that add quality, appearance and value to the properties on which they are fitted.***

### Materials

#### Why do we specialize in copper?

Copper lasts, in fact it will outlast the life of most buildings on which it is fitted. It has that unmistakable European look of quality, it is environmentally friendly and it will add real value to any building on which it is used. It makes an unmistakable statement that the owner or the designer understands the importance of building with real quality. The Zambelli copper system will never require painting; it will age gracefully over time from the initial bright copper color to the beautiful and elegant look of aged copper as seen in all the best buildings in Europe. Of course, if painting is required, this can be arranged.

### Half Rounds Gutters

#### Why a half round copper gutter system?

The half round copper gutter design was chosen as it is simply the best.

- It does not hold water because the lowest point is always level with the outlet.
- Its very shape is pleasing to the eye and speaks of quality
- It is stronger as the total shape gives it great natural strength.
- It will never need replacing in normal service

The Zambelli system, slowly developed and polished over the last 140 years has a full range of accessories including joiners, angles, rainwater heads, down pipes and fittings which are all designed to be fitted with a minimum of labor while resulting in an elegant and seamless finish which speaks of European efficiency and engineering..

### The Guttering System

#### What components does the system contain?

The Zambelli system has gutters in widths of 110mm, 150mm, and 200mm in standard lengths of 3m or 6m, down pipes in 80mm, 100mm and 120mm sizes and every component necessary to install a system on any roof. We can also supply in different lengths to meet your special requirements.

The system is designed to be quick and easy to assemble and install, with most components allowing for no waste, no rivets, no soldering or silicon.

### Roofing and Cladding systems

#### Does Zambelli also supply Roofing and cladding systems?

Zambelli can also supply a matching copper roofing system based on our either a corrugated section or our 18 inch Rib roof system. We also have our own cladding system.

#### So explain again why we should insist on copper?

While Zambelli can supply its systems in the full range of materials, based on our 140 years of experience, we know that the highest quality and highest value system is based on the use of copper. While a little more expensive to fit, its value will just increase over time, it will give peace of mind and it will more than pay for itself in added resale value.

---

**There is no doubt that doing it right first time in copper will in the long term be one of the best decisions you will ever make.  
It will add value to your building and give you peace of mind.**
