

The simplest and best system on the market.

**No riveting or use of silicon,
Quick and easy to fit**

German Engineering Matched with Australian Manufacture.

New to Australia but a European leader since 1862, Zambelli Rainwater Products are now being manufactured in Australia. The Zambelli system has stood the test of time while being refined into the best roof plumbing system on the market. The system is built on a philosophy of only producing products that add quality, appearance and value to the properties on which they are fitted, while ensuring the product is easy to fit and service.

Materials

What materials are available?

We can provide most materials from our very cost effective Zinalume and galvanized products to the extremely long lasting quality of copper and zinc.

Half Rounds Gutters

Why a half round gutter system?

The half round copper gutter design was chosen as it is simply the best.

- It does not hold water because the lowest point is always level with the outlet.
- Its very shape is pleasing to the eye and speaks of quality
- It is stronger than its quad competitors as the round shape and strong edge design gives it great natural strength.

The Zambelli system, slowly developed and polished over the last 140 years has a full range of accessories including joiners, angles, rainwater heads, down pipes and fittings which are all designed to be fitted with a minimum of labor while resulting in an elegant and seamless finish which speaks of European efficiency and engineering.

The Guttering System

What components does the system contain?

The Zambelli system has gutters in widths of 110mm, 150mm, and 200mm in standard lengths of 3m or 6m, down pipes in 80mm, 100mm and 120mm sizes and every component necessary to install a system on any roof. We can also supply in different lengths to meet your special requirements.

The system is designed to be quick and easy to assemble and install, with most components allowing for no waste, no rivets, no soldering or silicon.
